Section 2: EX-99.1 (EX-99.1)

Exhibit 99.1

Chart Industries, Inc. Books \$10 Million Order for Utility-Scale LNG Project

Atlanta, Georgia – June 6, 2019 - Chart Industries, Inc. (NASDAQ: GTLS), a leading diversified global manufacturer of highly engineered equipment for the industrial gas and energy industries, has booked a \$10.4 million order for the liquefier, compressor, and tank equipment content on a utility-scale liquefied natural gas (LNG) project in the Northeast United States.

The small-scale LNG (“ssLNG”) and utility-scale LNG markets serve a different customer set than mid-scale and base-load export terminal operators. These smaller liquefaction plants typically have a production capacity of less than 500,000 tons per year, and serve specific uses such as marine bunkering, fuel for over the road transport, and power generation in targeted locations. Utility clients are moving toward LNG as an option for a peak capacity market demand solution in gas pipeline constrained areas such as the East Coast of the United States. This is a natural solution for geographies that have distribution system growth while unable to add incremental capacity.

This trend is evidenced by other recently announced utility-scale projects on which we have equipment and process content. In the fourth quarter of 2018, we booked an \$8.4 million order for the first LNG project for NiChE LLC, a Dominion Energy/REV LNG Joint Venture. This project, Towanda, is a 50,000 gallon per day nitrogen cycle liquefier in Northeastern Pennsylvania. We are providing the liquefier and the compressor for the plant which is expected to be actively producing by the end of 2019. We are working with ODIN as the EPC for both of these projects. ODIN, formerly Northstar Industries, is a leading utility-scale LNG and natural gas infrastructure EPC provider that Chart has worked with many times over the last 25 years of the company’s existence.

The activity in the utility-scale LNG space is not limited to the Northeast United States. Duke Energy, the parent of Piedmont Natural Gas, continues to progress its LNG strategy. In May 2019, Piedmont Natural Gas announced the start of its construction of their 1 billion-cubic-foot storage facility, with an estimated completion date in the summer of 2021. Earlier in 2019 we booked an order from Nikkiso Cosmodyne for the supply of brazed aluminum heat exchangers for a major utility company in the United States. Outside of the United States, there are significant opportunities for island-based LNG to drive power demand, especially in the Mediterranean Sea and Southeast Asia.

“Our unique position of providing equipment and process for liquefaction, storage and transport across the LNG cycle supports the utility-scale LNG and small-scale LNG customers,” stated Jill Evanko, Chart Industries’ CEO. “We expect this LNG application to gain momentum as utility companies seek alternative, standardized, cost effective solutions to the increasing demand on power grids.”

Small-scale and utility-scale LNG is projected to grow to between 75 million and 95 million tons by 2030. In the next three years, we estimate total market opportunity to be over \$650 million for Chart equipment and process on these applications.
