JANUS CAPITAL SUBSIDIARY INTECH WINS FIRST DANISH MANDATE FOR PENSIONSKASSERNES ADMINISTRATION A/S (PKA)

LONDON – Janus Capital Group Inc. (NYSE: JNS) today announced that its subsidiary INTECH (Enhanced Investment Technologies LLC)* has been awarded a US enhanced equity mandate, worth approximately \$330 million, from Pensionskassernes Administration (PKA), Denmark's largest administration company for occupational pension funds.

INTECH will manage an enhanced US large-cap equity strategy benchmarked against the S&P 500 and in accordance with PKA's ethical guidelines. INTECH will draw from securities in the S&P 500 Index to create a portfolio that will attempt to outperform the S&P 500 benchmark with equal or less risk.

“We're delighted to establish a relationship with PKA and to be awarded our first institutional mandate in Denmark.” said **Henrik Rox Hansen, Institutional Director, Continental Europe for Janus Capital International Limited**. “It's further recognition of the strong demand we are seeing in the Nordic region and elsewhere in Europe for INTECH's unique risk-controlled US and global equity strategies.”

By capitalizing on the natural price movement of individual stocks, INTECH portfolios seek to offer better upside potential than the market with less relative risk. INTECH has used this process to successfully manage money for institutional clients and investors since 1987, reflecting one of the longest continuous records of mathematical equity investment strategies in the industry.

“INTECH's first win in Denmark reflects the increasing recognition in the Nordic region of our history of outperforming a given benchmark with lower levels of relative risk,” said **David Schofield**,

President of INTECH's international division. "I am confident that over time we will become a leading provider of enhanced and risk managed equity strategies to Danish institutions."

Created by Dr. Robert Fernholz, INTECH Chief Investment Officer, INTECH's proprietary investment process relies on precise mathematical methodology rather than fundamental analysis of companies. INTECH begins by identifying target weights for individual stocks in the portfolio with high relative volatility to the benchmark and low correlation to each other. With those characteristics, INTECH builds a portfolio of stocks -- within specific risk constraints -- designed to take advantage of the natural volatility of stock price movement. The result is a portfolio of stocks that seeks to produce an overall return greater than the benchmark index, but with less relative risk. This structured process results in virtually no style drift.

About Janus Capital Group Inc.
