JANUS SUBSIDIARY INTECH LAUNCHES NEW GLOBAL EQUITY CAPABILITY FOR INSTITUTIONAL INVESTORS; INTECH'S FIRST NON-US STRATEGY

New offering aims to build on INTECH's 18-year history of achieving excess returns with high information ratios in U.S. portfolios

LONDON - Janus Capital Group Inc. (NYSE: JNS) subsidiary Enhanced Investment Technologies LLC (INTECH), today announced the launch of a global core equity capability for institutional investors. The new offering was developed in response to strong institutional demand for an active risk managed global equity capability to complement INTECH's range of US equity strategies.

The INTECH global core equity strategy, a logical extension of the firm's disciplined mathematical investment process, uses a universe of global securities benchmarked to the MSCI World Index. The strategy will target an annualized average gross return over the long term of between 2.50% and 3% above its benchmark and will complement Janus' range of concentrated fundamental actively managed global equity portfolios.

Using its unique mathematical investment process, INTECH seeks to outperform its benchmark indices within the confines of benchmark-like risk.

"This offering has been developed in response to strong demand for a risk-managed global equity strategy that aims to produce better upside potential than the market, without incurring unreasonable risk," said **Robert Garvy, Chairman and Chief Executive Officer of INTECH**. "We're confident institutional investors familiar with INTECH's proven track record of running highly disciplined and risk-managed US portfolios will be attracted to INTECH's new global equity product."

An INTECH global core equity pilot portfolio was funded with seed capital on December 22, 2004. Since inception this portfolio, as of December 31, 2005, has produced a gross return of 15.74%, a return of 4.64% above its benchmark, the MSCI World Index.

“We’ve added this capability after two years of research that showed INTECH’s long-established investment process for US equities is equally applicable to non-US markets,” said **Dr. Robert Fernholz, Chief Investment Officer of INTECH**. “Rigorous research and encouraging results with seed money since December 2004 have demonstrated we have the potential to build on our experience of achieving high information ratios in our U.S. equity strategies and apply that same methodology to global equity portfolios.”

By capitalizing on the natural price movement of individual stocks, INTECH portfolios seek to offer better upside potential than the market with benchmark-like risk. INTECH has used this process to successfully manage money for institutional clients and investors since 1987, reflecting one of the longest continuous records of mathematical equity investment strategies in the industry.

Created by Dr. Robert Fernholz, Chief Investment Officer at INTECH and a former professor at Princeton University, INTECH's proprietary investment process relies on a precise mathematical methodology rather than fundamental analysis of companies. INTECH begins by identifying stocks with high relative volatility and low correlation to each other. Within specific risk constraints, INTECH identifies target weightings of these stocks in an attempt to take advantage of the natural volatility of stock price movement. The result is a portfolio of stocks that seeks to produce an overall return greater than the benchmark index, but with less downside risk. This structured process results in virtually no style drift.

In addition to the new global equity strategy, INTECH's U.S. risk-managed active equity disciplines include: Enhanced Index, Enhanced Plus, Large Cap Core, Large Cap Value and Large Cap Growth.

Institutional investors can invest in the global core equity strategy either on a separate account basis or (for non-US institutional investors only) through the institutional share class (US Dollar, Euro and GBP classes) of the Janus World Funds (JWF) Global Risk Managed Core fund. The fund will build on the success of the JWF US Risk Managed Core fund which, since its launch in April 2003, now has assets under management for non-US clients of over US\$2 billion.

Janus World Funds Plc are a series of Ireland-based funds introduced in 1998 by the international division of Janus. Modeled after some of Janus’ strongest-performing US-based funds they offer institutional and professional investors a variety of fundamental and mathematical investment

disciplines, including US Growth, US Core, US Value, Global Equity, US Balanced, Income and Currency Reserve Funds.

About INTECH

Headed by Chief Executive Officer Robert Garvy, INTECH was founded in 1987 following research undertaken by Dr. Robert Fernholz, the company's Chief Investment Officer, and the publication of his paper in 1982 on mathematical investment processes called "Stochastic Portfolio Theory and Stock Market Equilibrium." Headquartered in Palm Beach Gardens, Florida, and with research facilities in Princeton, New Jersey the company employs 56 staff and manages approximately \$44.7 billion in assets as of December 31, 2005.
