JANUS CAPITAL SUBSIDIARY INTECH WINS \$600 MILLION ENHANCED US LARGE CAP CORE MANDATE FOR DUTCH PENSION PLAN FOR THE PRINTING INDUSTRY (PGB)

LONDON – Janus Capital Group Inc. (NYSE: JNS) today announced its subsidiary INTECH (Enhanced Investment Technologies LLC)* has been awarded a US enhanced equity mandate, worth approximately \$600 million, from Dutch pension plan PGB, the printing industry’s pensions fund in The Netherlands.

INTECH will manage an enhanced US large-cap core equity strategy benchmarked against the MSCI USA Index. Using its unique mathematical investment process, INTECH attempts to outperform its benchmark indices within the confines of benchmark-like risk.

“The Netherlands now represents our largest single market for institutional business in Europe,” said **Erich Gerth, Chief Executive Officer of Janus Capital International Limited, the firm’s international division.** “This win is further recognition of INTECH’s disciplined investment process, our commitment to serving Dutch investors and our growing role as the US and global investment specialist for Netherlands-based pension schemes,”

By capitalizing on the natural price movement of individual stocks, INTECH portfolios seek to offer better upside potential than the market with less relative risk. INTECH has used this process to successfully manage money for institutional clients and investors since 1987, reflecting one of the longest continuous records of mathematical equity investment strategies in the industry.

“This latest success reflects the growing demand we’re seeing in The Netherlands for INTECH’s highly disciplined and risk managed approach to investing,” said **David Schofield, President of INTECH’s**

international division. “INTECH’s history of out performing with lower levels of relative risk challenges the myth that US large-cap indexes are efficient and can’t be beaten over the long term.”

“Hiring INTECH to manage a portion of our US equities portfolio is a reflection of our continuing strategy to outsource to regional specialists,” **said PGB Chief Investment Officer Dirk Wieman.** “When searching for a US specialist equity manager, we were impressed by INTECH’s ability to achieve disciplined equity management with high information ratios.”

Created by Dr. Robert Fernholz, INTECH Chief Investment Officer, INTECH's proprietary investment process relies on precise mathematical methodology rather than fundamental analysis of companies. INTECH begins by identifying target weights for individual stocks in the portfolio with high relative volatility to the benchmark and low correlation to each other. With those characteristics, INTECH builds a portfolio of stocks -- within specific risk constraints -- designed to take advantage of the natural volatility of stock price movement. The result is a portfolio of stocks that seeks to produce an overall return greater than the benchmark index, but with less relative risk. This structured process results in virtually no style drift.

About Janus Capital Group Inc.
